Roth
Lab13
GEOG479

For this lab I had trouble figuring out what we were supposed to do. I went into Geoserver and created a new DataStore, and then added a new resource using the fall17 database. I then visualized this in OpenLayers, but there was no data available only the map of the USA. Fig1 below is a screen capture of the map I created in OpenLayers.

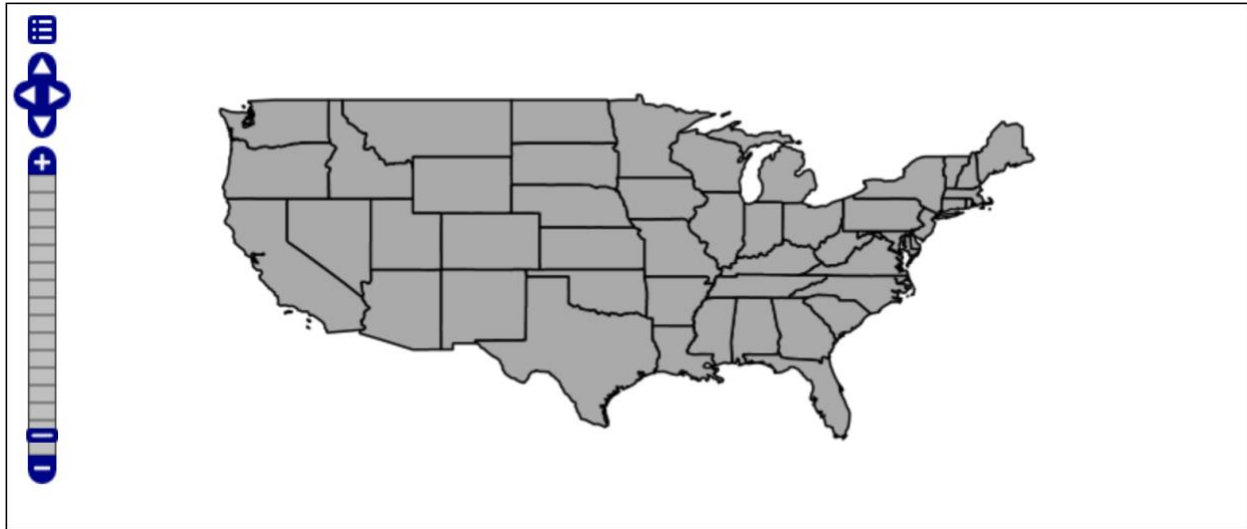

Fig1. A map created in GeoServer and displayed in OpenLayers.
